Making the **most** of your asset fleet

RFID Bulk Scanning Solutions - UHF

Management
Optimisation
Security
Tracking

REAL DATA..REAL APPLICATION..REAL RESULTS..

The Utopia is Now Your Reality

Experience the immediate identification of an entire product load in one scan. After three years of testing and development, IntelliTap is the first company to provide customers with real financial and inventory benefits, updated business systems, optimised supply chains and increased customer satisfaction benefits that are enjoyed via bulk RFID scanning applications.

Complete VisibiliTy of Your Critical Assets

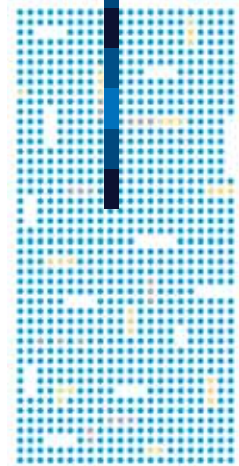

VisibiliTy is designed to work with assets that are considered difficult to track and manage and the solution overcomes the technological and supply chain process obstacles associated with this. We have specific expertise with the complex supply chains in brewing, the gas cylinder industry, plant and machinery environments, healthcare, and automotive (including vehicle tracking).

Making Data Take Action

Our solution is based on solid fundamental principles & skills that combines supply chain expertise, asset management, leading edge technologies (such as RFID and GPS), and most importantly, knowledge sharing and specific analysis and application to YOUR industry. We realise that no two supply chains are the same, and depth of knowledge in entire industries, often on a global scale, means that we can realistically assist you to extract genuine information from data and make decisions that apply directly to your bottom line.

RFID UHF Bulk Scanning In Action

Our standards based UHF solution is designed with an individualised approach that reads bulk loads at various critical points in the supply chain such as depot entrances via a full curtain-side trailer load, or warehouse entry/exit via a bulk load on a forklift truck.

VisibiliTy 4.0 – Comprehensive, yet Concise

Our standards based web 2.0 solution comes with a comprehensive suite of powerful asset driven standard modules that are smartly and accurately pre-configured to your business requirements.

The solution can be integrated into your existing business systems and processes. We are constantly developing additional bespoke modules for individuals and entire industries, and the scalable, flexible nature of the application allows upgrades to be a simple, and often seamless process. Reporting is accessible, part user configurable, and again our skillset and depth of knowledge means we always go the extra mile to ensure complete relevance and mindfulness of business objectives.

For more information on VisibiliTy 4.0 please visit our website.

Solution at a glance

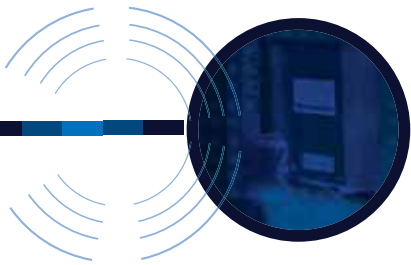

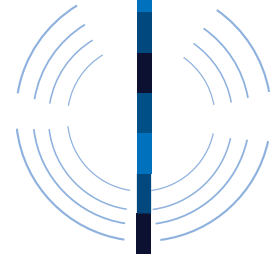

- Automatic Identification of bulk loads in one scan
- Specific application to your business & industry
- Supply chain, RFID (& complete Auto ID) expertise spanning over ten years
- Genuine supply chain, customer service, and bottom line benefits

Technical Specification Highlighted Features

- UHF (Ultra High Frequency) readers, fixed and Transportable
- Multiple tag reads, fast read rate and high performance 5.5 metre* long read range.
- Bespoke robust reader & tag design adaptable to external environment conditions
- Bulk scanning capability for instant multiple asset identification With anti-collision mode
- Suitable for a variety of applications including curtainside trailer vehicles & forklifts
- Unique Passive UHF RFID tag with special “Stay tune on metal” capability
- Secure tag affixation technique
- EPC Class1 Gen2 protocol compliant for maximum standards compatibility

*Dependent on individual conditions.
